Integument, Pigments, and Hormonal Processes: Volume 9: Integument, Pigments and Hormonal Processes: Integument, Pigment and Hormonal Processes Vol 9 (Biology of Crustacea)

The Biology of Crustacea is a comprehensive treatise, which should become the standard reference in its field. Incorporating the contributions of a distinguished international group of scientists, it encompasses the significant findings - including methods - in three general areas of crustacean research: systematics, morphology, evolution, and the fossil record; physiology, ecology, and behaviour; applied biology, including fisheries, mariculture, and pathology.

The state-of-the-art presentations provide both background information and vital perspective. The complete set, and the individual volumes, will be of value to zoologists, marine biologists, fisheries biologists, physiologists, ecologists, environmentalists, endocrinologists, anatomists, neurobiologists, and paleontologists.
