Logistic Regression Models (Chapman & Hall/CRC Texts in Statistical Science)

Joseph M. Hilbe

Logistic Regression Models (Chapman & Hall/CRC Texts in Statistical Science) Joseph M. Hilbe

Logistic Regression Models presents an overview of the full range of logistic models, including binary, proportional, ordered, partially ordered, and unordered categorical response regression procedures. Other topics discussed include panel, survey, skewed, penalized, and exact logistic models. The text illustrates how to apply the various models to health, environmental, physical, and social science data.

Examples illustrate successful modeling

The text first provides basic terminology and concepts, before explaining the foremost methods of estimation (maximum likelihood and IRLS) appropriate for logistic models. It then presents an in-depth discussion of related terminology and examines logistic regression model development and interpretation of the results. After focusing on the construction and interpretation of various interactions, the author evaluates assumptions and goodness-of-fit tests that can be used for model assessment. He also covers binomial logistic regression, varieties of overdispersion, and a number of extensions to the basic binary and binomial logistic model. Both real and simulated data are used to explain and test the concepts involved. The appendices give an overview of marginal effects and discrete change as well as a 30-page tutorial on using Stata commands related to the examples used in the text. Stata is used for most examples while R is provided at the end of the chapters to replicate examples in the text.

Apply the models to your own data

Data files for examples and questions used in the text as well as code for user-authored commands are provided on the book's website, formatted in Stata, R, Excel, SAS, SPSS, and Limdep.

See Professor Hilbe discuss the book.

From reader reviews:

Robert Stewart:

As people who live in the modest era should be change about what going on or details even knowledge to make all of them keep up with the era and that is always change and move forward. Some of you maybe may update themselves by reading books. It is a good choice in your case but the problems coming to a person is you don't know what type you should start with. This Logistic Regression Models (Chapman & Hall/CRC Texts in Statistical Science) is our recommendation so you keep up with the world. Why, because this book serves what you want and need in this era.

Dennis Fleenor:

Typically the book Logistic Regression Models (Chapman & Hall/CRC Texts in Statistical Science) has a lot of knowledge on it. So when you check out this book you can get a lot of benefit. The book was written by the very famous author. This articles author makes some research prior to write this book. This particular book very easy to read you will get the point easily after scanning this book.

Lorenzo Logan:

Exactly why? Because this Logistic Regression Models (Chapman & Hall/CRC Texts in Statistical Science) is an unordinary book that the inside of the reserve waiting for you to snap that but latter it will jolt you with the secret this inside. Reading this book alongside it was fantastic author who all write the book in such amazing way makes the content inside easier to understand, entertaining method but still convey the meaning totally. So , it is good for you for not hesitating having this ever again or you going to regret it. This unique book will give you a lot of advantages than the other book get such as help improving your talent and your critical thinking technique. So , still want to delay having that book? If I ended up you I will go to the guide store hurriedly.

Marilyn Vance:

Your reading 6th sense will not betray a person, why because this Logistic Regression Models (Chapman & Hall/CRC Texts in Statistical Science) e-book written by well-known writer who really knows well how to make book that may be understand by anyone who read the book. Written within good manner for you, dripping every ideas and composing skill only for eliminate your personal hunger then you still doubt Logistic Regression Models (Chapman & Hall/CRC Texts in Statistical Science) as good book not merely by the cover but also by the content. This is one publication that can break don't judge book by its deal with, so do you still needing another sixth sense to pick that!?! Oh come on your looking at sixth sense already told you so why you have to listening to an additional sixth sense.
