Statistical Models and Methods for Biomedical and Technical Systems (Statistics for Industry and Technology) Filia Vonta, M.S. Nikulin, Nikolaos Limnios, Catherine Huber-Carol

An outgrowth of the 'International Conference on Statistical Models for Biomedical and Technical Systems,' this book is comprised of contributions from renowned experts, demonstrating the significance of current research on theory, methods, and applications of the field.

The contributions, which deal with the mathematical aspects of survival analysis and reliability as well as other topics, are a careful selection of invited and contributed chapters, reflecting recent developments in the following areas: applications in epidemiology; probabilistic and statistical models and methods in reliability; models and methods in survival analysis, longevity, aging, and degradation; accelerated life models; quality of life; new statistical challenges in genomics.

The book will be useful to a broad interdisciplinary readership of researchers and practitioners in applied probability and statistics, industrial statistics, biomedicine, biostatistics, and engineering.
